Biotechnology in the Neckar-Alb region:

Born here – into the future from here

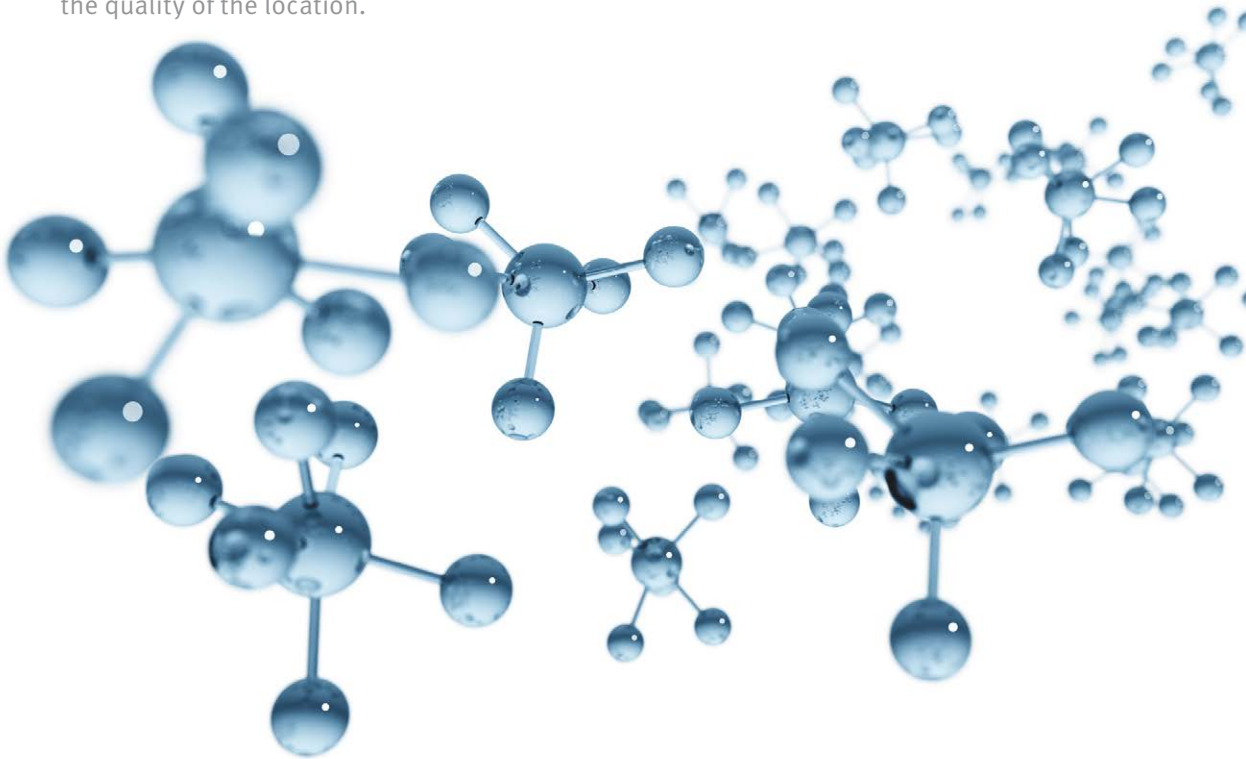

As early as 1869, Friedrich Miescher discovered the nucleic acid in Tübingen, which provided the foundation for modern biochemistry. It is therefore no exaggeration to claim that the roots of biotechnology lie in the Neckar-Alb region. And this can be seen everywhere. Today, the biotechnology cluster is one of the most performant in Germany.

In the area between Stuttgart, Tübingen, Esslingen, Reutlingen and Neckar-Alb, the “BioRegio STERN” supports the development of the life sciences cluster. It is a central point of contact for life sciences companies, and for those interested in establishing a business in biotechnology or medical technology.

The majority of this is attributable to Neckar-Alb. Companies whose products have the potential to change the world are at home right here. They manufacture implants that replace our sense organs, or develop therapies that can overcome formerly incurable diseases. The fact that our biotechnology cluster is so well-developed is not only attributable to the great past, and the strong company of the present. The future is also secured: State-of-the-art equipped technology parks such as the TTR (Technology park Tübingen-Reutlingen) offer the best conditions for spin-offs and new business establishments.

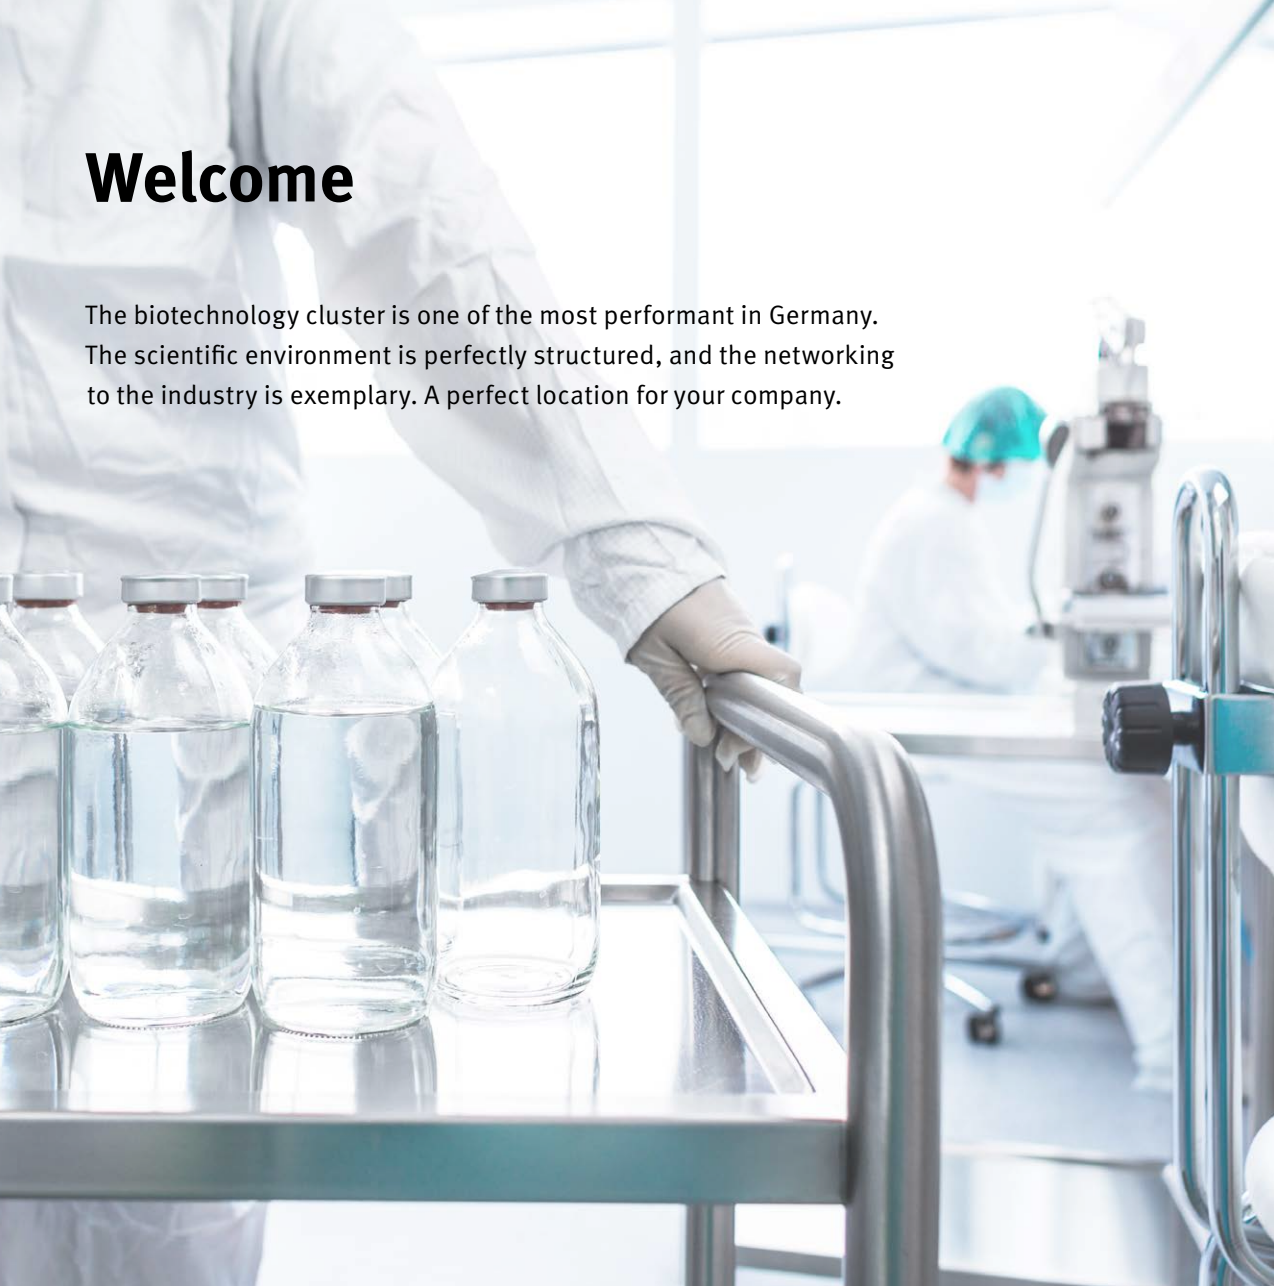

A solid network based on economics and research

In a dynamic, science-driven industry such as biotechnology, a good networking with researchers at universities, colleges and institutes significantly determines the quality of the location.

Welcome

The biotechnology cluster is one of the most performant in Germany. The scientific environment is perfectly structured, and the networking to the industry is exemplary. A perfect location for your company.

A place to feel at home

Good locations provide not only companies and entrepreneurs,
but also their employees with a place to feel at home.

Better together

The biotechnology cluster is comfortably embedded in the Neckar-Alb region. Scientific institutions fuel the success:

With Prof. Dr. Christiane Nüsslein-Volhard, a major developmental biologist and Nobel laureate is active in the region. The University of Tübingen offers the first biochemistry study course in Germany. Research facilities, such as the Institute for Natural Sciences and Medicine (NMI), or the Max Planck Institutes of the University of Tübingen are driving the basic research work. As a starting point for the economic exploitation of theoretical knowledge, the University Hospital of Tübingen is an indispensable partner.

The universities of Reutlingen and Albstadt-Sigmaringen also offer perfectly suited courses of study for the respective fields. The result: many spin-offs that create a tremendous future potential. These quickly evolve into thriving start-up companies. A further connection is to the perfectly developed medical technology cluster, which also links around 80 companies. All in all, the perfect climate to successfully shape the future.

Neckar-Alb region

Welcome to the future

The Neckar-Alb region is located in the middle of the southern economic region between Stuttgart, Zurich and Munich, and includes the counties of Tübingen, Reutlingen and Zollernalb. As part of the European Metropolitan Region Stuttgart, it has a future-oriented cluster of high-tech industries.

The motorway network can easily be reached via the A8 and the A81. The Stuttgart International Airport can be reached in just 20 minutes. Excellent universities create a productive innovation climate, which is also reflected in the above-average innovation index. The great landscape along the Swabian Alb offers a first-class lifestyle and a multitude of leisure activity options.

Whether they are investors and entrepreneurs, researchers and visionaries, specialists or families: Everyone will feel right at home in the Neckar-Alb region.

We'd be happy to help you

The perfect location for biotechnology

The Neckar-Alb region is the perfect location for you because ...

... biotechnology has its roots here, and Neckar-Alb is also an international science hub.

... it provides a perfect link between research and the economic implementation – and an above-average innovation index.

... both companies and employees feel at home here – and we are at the very top of location rankings.

... the infrastructure including the A8 and A81 as well as the Stuttgart International Airport form a strong foundation together with the surrounding economic zone.

And now it's your turn: Simply contact us to receive support for the future of your company.
